Notes: Panel B is defined by `ex_super=="f"`. The core sample construction is retained and the only additional activity restriction is `first_month_ltm`  $\geq 1$ ; no `ex_super2`, review-count, rating, or other added filter is imposed. Column (1) uses side-specific MSE-optimal bandwidths with time fixed effects; column (2) doubles those bandwidths; columns (3)–(5) use (0.2,0.1), (0.3,0.15), and (0.4,0.2); column (6) omits time fixed effects. Standard errors are clustered by listing ID. *obs* is the raw FULL sample size and *obs\_h* is the number inside the RD bandwidth.
